

What is Ground Penetrating Radar?

- Ground Penetrating Radar (GPR), also called georadar or ground probing radar.
- GPR uses three main components: a control unit, an antenna, and a power supply.
- GSSI GPR systems can operate on various power sources, including small rechargeable batteries, vehicle batteries, or standard 110/220-volt outlets, with connectors and adapters available for each. The featured unit can run on an internal rechargeable battery or external power.
